

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of the claims:

1. (currently amended) A method of generating a graphical portion of a graphical user interface (GUI), the graphical portion concerning aspects of a storage domain, the method comprising:

illustrating a tree hierarchy and a table portion;

including, on the tree hierarchy, a node at a first level corresponding to a set of at least two file systems that are members of the storage domain;~~and~~

including, on the tree hierarchy, nodes at a second level reporting to the first-level node, each second-level node corresponding to a member of the set of files systems to which the first node corresponds;

including, on the tree hierarchy, nodes at a third level, each third-level node corresponding to a storage consumer having allocated storage capacity on the storage domain; and

including, on the table portion, the allocated storage capacity used by the storage consumer.

2. (currently amended) The method of claim 1, ~~wherein further comprising:~~

~~including, on the tree hierarchy, nodes at a third level, each third-level node regarding allotment of storage space to one or more entities;~~

each second-level node being a parent to at least one of the third-level nodes.

3. (currently amended) The method of claim 1–2, wherein each third-level node corresponds to one of an individual consumer or group of consumers using storage capacity on the storage domain ~~a set of storage consumers.~~

4. (currently amended) The method of claim 1–3, further comprising:

including, on the tree hierarchy, nodes at a fourth level;

wherein

each third-level node is a parent to at least one fourth-level node;

each third-level node corresponds to one of a set of instances of storage-consumers and a set of groups of storage-consumers, each group corresponding to instances of storage-consumers, respectively; and

each fourth-level node corresponds to a member of the set to which the parent third-level node corresponds.

5. (original) The method of claim 4, wherein two or more fourth-level nodes correspond to the same entity yet and report indirectly to two or more second-level nodes representing respective file systems.

6. (currently amended) The method of claim 1, wherein the storage domain includes a network-attached storage (NAS) device on which the at-least-two different file systems are mounted.

7. (currently amended) The method of claim 1, further comprising:

changing a number of rows in the table portion in response to expanding or collapsing the nodes at the second and third levels in order to show a row corresponding to each node currently displayed in the tree hierarchy~~illustrating the tree hierarchy as part of a tree-table.~~

8. (currently amended) A method of generating a graphical portion of a graphical user interface (GUI), the method comprising:

illustrating a tree-table having a tree hierarchy portion and a table portion;

including, on the tree-hierarchy portion, nodes corresponding to storage consumers that are members having allocated storage capacity on-of a storage domain; and

including, on the table-portion, rows and one or more columns,

the one-or-more columns each representing an attribute, respectively, regarding an allotment of storage space to the respective storage consumers, and

each row being aligned with one of the nodes, respectively, and including cells corresponding to the one or more columns.

9. (original) The method of claim 8, wherein the attribute is one of:

- a soft limit on storage space;
- a hard limit on storage space; and
- a currently-consumed amount of storage space.

10. (original) The method of claim 9, wherein:

- the attribute is a first attribute;
- the first attribute is the soft limit; and
- the method further comprises

including, on the table-portion, another column representing a second attribute, the second attribute being a size of a grace period in which the soft limit can exceeded.

11. (original) The method of claim 8, further comprising:

illustrating, in response to a user request, a sortable table corresponding to the table-portion.

12. (original) The method of claim 11, wherein the sortable table includes all of the rows and the one-or-more columns of the table-portion.

13. (original) The method of claim 11, further comprising:

- toggling between the sortable table and the tree-table.

14. (currently amended) The method of claim 8, further comprising:

changing a number of rows in the table portion in response to expanding or collapsing the nodes corresponding to the storage consumers in order to show a row corresponding to each node currently displayed in the tree hierarchy wherein the storage

~~domain includes a network-attached storage (NAS) device on which the respective allotment of storage space takes place.~~

15. (currently amended) A method of generating a graphical portion of a graphical user interface (GUI), the method comprising:

illustrating a tree-table having a tree hierarchy portion and a table portion;

including, on the tree-hierarchy portion, a node at a first level corresponding to one file system in a storage domain;

including, at a second level on the tree-hierarchy portion, at least one of

a node belonging to a first node-category corresponding to a set of instances of storage-consumers that are allocated storage space on the storage domain, and

a node belonging to a second node-category corresponding to a set of groups of storage-consumers that are allocated storage space on the storage domain,

each second-level node reporting to the first-level node; and

including, on the table-portion, rows and one or more columns,

the one-or-more columns each representing an attribute, respectively, regarding an allotment of storage space to the respective storage consumers, and

the rows being aligned with the first-category and second-category nodes, respectively, and including cells corresponding to the one or more columns.

16. (original) The method of claim 15, further comprising:

including, on the tree-hierarchy portion, nodes at a third level that report to the first-category and second-category nodes, respectively,

each third-level node corresponding to a member of the set to which the parent first-category or second-category node corresponds, respectively; and

including, on the table-portion, rows that

align with the third-level nodes, respectively, and

include cells corresponding to the one or more columns.

17. (original) The method of claim 16, further comprising:

including, on the tree-hierarchy portion, at least two first-level nodes corresponding to at least two files system in the storage domain; and

including, on the tree-hierarchy portion, a node at a zeroith level representing all instances of file systems in the storage domain,

the zeroith-level node being the parent to each of the first-level nodes.

18. (original) The method of claim 17, wherein a particular third-level node can report indirectly to two or more of the at-least-two second-level nodes.

19. (currently amended) A machine-readable medium including instructions execution of which by a host produces a graphical portion of a graphical user interface (GUI), the graphical portion concerning aspects of a storage domain, the machine-readable instructions comprising:

a code segment for illustrating a tree hierarchy and a table portion;

a code segment for including, on the tree hierarchy, a node at a first level corresponding to a set of at least two file systems that are members of the storage domain; ~~and~~

a code segment for including, on the tree hierarchy, nodes at a second level reporting to the first-level node, each second-level node corresponding to a member of the set of files systems to which the first node corresponds;

including, on the tree hierarchy, nodes at a third level, each third-level node corresponding to a storage consumer having allocated storage capacity on the storage domain; and

including, on the table portion, the allocated storage capacity used by the storage consumer.

20. (currently amended) The machine-readable instructions of claim 19, wherein further comprising:

~~a code segment for including, on the tree hierarchy, nodes at a third level, each third-level node corresponding to a set of storage consumers;~~

each second-level node being a parent to at least one of the third-level nodes.

21. (currently amended) The machine-readable instructions of claim 19, wherein the storage domain includes a network-attached storage (NAS) device on which the at-least-two different file systems are mounted.

22. (currently amended) The machine-readable instructions of claim 19, further comprising:

a code segment for changing a number of rows in the table portion in response to expanding or collapsing the nodes at the second and third levels in order to show a row corresponding to each node currently displayed in the tree hierarchy-illustrating the tree-hierarchy as part of a tree-table.

23. (currently amended) A machine-readable medium including instructions execution of which by a host produces a graphical portion of a graphical user interface (GUI), the machine-readable instructions comprising:

a code segment for illustrating a tree-table having a tree hierarchy portion and a table portion;

a code segment for including, on the tree-hierarchy portion, nodes corresponding to storage consumers that are members having allocated storage capacity on ~~of~~ a storage domain; and

a code segment for including, on the table-portion, rows and one or more columns,

the one-or-more columns each representing an attribute, respectively, regarding an allotment of storage space to the respective storage consumers, and

each row being aligned with one of the nodes, respectively, and including cells corresponding to the one or more columns.

24. (original) The machine-readable instructions of claim 23, wherein the attribute is one of:

a soft limit on storage space;

a hard limit on storage space; and

a currently-consumed amount of storage space.

25. (original) The machine-readable instructions of claim 24, wherein:

the attribute is a first attribute;

the first attribute is the soft limit; and

the machine-readable instructions further comprises

a code segment for including, on the table-portion, another column representing a second attribute, the second attribute being a size of a grace period in which the soft limit can exceeded.

26. (original) The machine-readable instructions of claim 23, further comprising:

a code segment for illustrating, in response to a user request, a sortable table corresponding to the table-portion.

27. (original) The machine-readable instructions of claim 26, further comprising:

a code segment for toggling between the sortable table and the tree-table.

28. (currently amended) The machine-readable instructions of claim 23 further comprising:

a code segment for changing a number of rows in the table portion in response to expanding or collapsing the nodes corresponding to the storage consumers in order to show a row corresponding to each node currently displayed in the tree hierarchy; wherein the storage domain includes a network attached storage (NAS) device on which the respective allotment of storage space takes place.

29. (currently amended) An apparatus for managing aspects of a storage domain, the apparatus comprising:

a host operatively connected to components of the storage domain; and

manager means for running on the host and for managing aspects of the storage domain in part by producing a graphical user interface (GUI); and

generation means for generating a graphical portion of the GUI, the generation means being operable to

portray, in the graphical portion, a tree hierarchy and a table portion,

portray, on the tree hierarchy, a node at a first level corresponding to a set of at least two file systems that are members of the storage domain, ~~and~~

portray, on the tree hierarchy, nodes at a second level reporting to the first-level node, each second-level node corresponding to a member of the set of files systems to which the first node corresponds,

portray, on the tree hierarchy, nodes at a third level, each third-level node corresponding to a storage consumer having allocated storage capacity on the storage domain, and

portray, on the table portion, the allocated storage capacity used by the storage consumer.

30. (currently amended) The apparatus of claim 29, wherein ~~the generation means is further operable to portray, on the tree hierarchy, nodes at a third level, each third level node corresponding to a set of storage consumers;~~

each second-level node being a parent to at least one of the third-level nodes.

31. (currently amended) The apparatus of claim 29, wherein the generation means is further operable to change a number of rows in the table portion in response to expanding or collapsing the nodes at the second and third levels in order to show a row corresponding to each node currently displayed in the tree hierarchy ~~dispose the tree hierarchy as part of a tree-table.~~

32. (currently amended) An apparatus for managing aspects of a storage domain, the apparatus comprising:

a host operatively connected to components of the storage domain; and

manager means for running on the host and for managing aspects of the storage domain in part by producing a graphical user interface (GUI); and

generation means for generating a graphical portion of the GUI, the generation means being operable to

portray, in the graphical portion, a tree-table having a tree hierarchy portion and a table portion,

portray, on the tree-hierarchy portion, nodes corresponding to storage consumers that are members having allocated storage capacity on of a storage domain, and

portray, on the table-portion, rows and one or more columns,

the one-or-more columns each representing an attribute, respectively, regarding an allotment of storage space to the respective storage consumers, and

each row being aligned with one of the nodes, respectively, and including cells corresponding to the one or more columns.

33. (original) The apparatus of claim 32, wherein the attribute is one of:

- a soft limit on storage space;
- a hard limit on storage space; and
- a currently-consumed amount of storage space.

34. (original) The apparatus of claim 33, wherein:

- the attribute is a first attribute;
- the first attribute is the soft limit; and

the generation means is further operable to portray, on the table-portion, another column representing a second attribute, the second attribute being a size of a grace period in which the soft limit can exceeded.

35. (original) The apparatus of claim 32, wherein the generation means is further operable to portray in the graphical portion, in response to a user request, a sortable table corresponding to the table-portion.

36. (original) The apparatus of claim 35, wherein the generation means is further operable to toggle between the sortable table and the tree-table.
